School of Computer Science and Artificial Intelligence

Lab Assignment # 18.2

Program : B. Tech (CSE)

Specialization :AIML

Course Title : AI Assisted Coding

Course Code : 23CS002PC304

Semester : VI

Academic Session : 2025-2026

Name of Student : G. Ushasree

Enrollment No. : 2303A52431

Batch No. : 34

Date :31/03/26

Task 1: Air Quality API Integration

Prompt:

```
Generate a Python script using requests to fetch real-time air quality data for a city.
Include error handling for invalid city, API key issues, and timeouts.
Display AQI, pollution level, and dominant pollutant.
```

Code:

```python
# Import necessary libraries
import requests
import json
from google.colab import userdata

# --- Configuration ---
API_KEY = userdata.get('AIzaSyAKt-FzR77SellVZqejR0HqGeO8QEZv0pA') # Retrieve API key from Colab secrets
